## OBJECTIVE

I have a vision for what is next for my company. I want to see all of our content responsive to screens of any size. Our concept of mobile should encompass Connected TVs, Blu-ray players, set-top boxes, and game consoles. I'm going to convince you to incorporate into apps features that only apps can have, that justify them being apps. I want to see Medley provide tools for curating content for devices that makes it a natural part of the workflow. We're going to build an architecture with inconsequential publishing delays. They will no longer be discussed. I have seen this company through "the draining of the swamp" and the toilsome have-to-dos. I want to be the person who leads us into the want-to-dos.

I have been employed as a web professional since 1996. I have not been this excited about the state of technology in 16 years. I will lead Cox into this space with Speed, Passion, and Courage.

---

## OVERVIEW

Manage systems engineers and software developers — Optimize SDLC and workflow — Develop web and mobile applications — Web and mobile architecture — Develop and deploy iPhone and Android apps — Develop and deploy PhoneGap HTML5+CSS3+JS apps — Manage vendors and contractors — Administer various Unix and Gnu/Linux — Administer virtualization hosts and guests — Optimize RAID, swap, and cache — MySQL schema design, tuning, replication, disaster planning, and HA — Audit application code for security and performance — Transform and migrate data — Manage SLAs as both the client and vendor — Strong verbal and written communication skills — Excellent troubleshooting and debugging skills — Unrepentant command line addict

---
